ART GALLERY DATABASE MANAGEMENT SYSTEM

Advanced Database Lab

BS(CS) – 6A

BACKGROUND

In this project, we will develop an Art Gallery Database Management System. No automated online Art Gallery Management System has been developed yet. Every entry/documentation was being done manually. With this system we will store records of all entities like customers, artists, artworks, genres and employees of the gallery.

OBJECTIVES

- To successfully create a complete working database system with eye-catching visuals.
- Track the record of all artworks and their bidding requested by the gallery management.
- Provide user-friendly interface that includes additional features that allows easier input and supports multiple views.
- Allow users to output visitor graphs and other statistics.

SCOPE

Automating the Art Gallery office work by:

- Painting/Sculpture registration
- Artist registration

- Bidding Track

GROUP MEMBERS

- Danish Khalid – 01-134141-029
- Rehan Khan – 01-134141-086
- Ali Afzal – 01-134141-105
